

For esophagogastroduodenoscopies (EGDs)
and other procedures

EGD Oxygen mask

Lack of oxygen can pose a threat to patients undergoing medical procedures under anesthesia. The EGD Oxygen Mask is designed to efficiently provide oxygen to patients undergoing procedures involving the insertion of instruments through the nose or mouth, such as bronchoscopies or esophagogastroduodenoscopies (EGDs). It can also be used as a regular oxygen mask by stoppering either port.

This mask is intended for single patient use.
